Outdoor Socks

Stay-Up Fit of COOLMAX® socks

Thanks to using LYCRA® fiber, COOLMAX® socks are designed to retain the fit and shape your customers love step after step, wash after wash.

PERFORMANCE IS NO SWEAT.

Whether you're hiking the Himalayas, climbing a rock wall or trekking through tough terrain, the key to perseverance is at your feet. So equip yourself with a tool that can give you a leg up over any landscape – COOLMAX® socks.

COOLMAX® socks are made for adventure. They wick moisture away from your feet for fast evaporation that helps keep you cool and dry. The COOLMAX® socks moisture management system is inherent in the unique fiber structure and can't be washed out – lasting for the lifetime of the sock.

After more than 25 years, COOLMAX® brand is still taking comfort and performance to new heights. Test them yourself and discover the power to conquer even the most daunting obstacles.

COOLMAX® fiber technology actively draws moisture away from the skin surface, dispersing it for rapid evaporation to keep you feeling cool and dry. The advantages are ideal for a wide range of outdoor sports and activities.

COOLMAX® socks deliver performance and comfort through the use of modified polyester fibers with special micro channel cross sections.
